Augmentative and Alternative Communication Instruction for Highly Impacted Students with ASD: High- and Low-Tech Strategies to Increase Communication

May 4, 2022, 3-4 pm

Registration is available on the
[TechKnowledgy Conference Program 2021-2022](#)

While many students with Autism Spectrum Disorder (ASD) learn effective verbal communication skills, there are still those learners who require Augmentative and Alternative Communication (AAC) techniques and devices to communicate. In this session, the presenters will discuss and model evidence-based practices to embed AAC device use across the school day to increase communication. In addition, they will also review ways to ensure families participate in the implementation of AAC. Finally, the presenters will explore creative ways to increase access to AAC devices across the Commonwealth.

Presenters:

Melanie Derry, M.S., CCC-SLP

Training and Technical Assistance Associate
VCU Autism Center for Excellence (VCU-ACE)
